

To Parents & Guardians of Adolescent Girls

From time to time it may be necessary for your daughter's health care provider to order a urine pregnancy test as part of her care. Evaluation and management of certain conditions require that this testing be performed – regardless of whether or not your daughter gives the provider a history of sexual activity – for the safety of your daughter and a possible unborn child. Such conditions may include but are not limited to menstrual problems, acne, abdominal pain, urinary complaints, fatigue, vomiting or genital complaints.

We hope to have the best possible patient/provider relationships at all times, and will continue to work toward this goal. Thank you for partnering with us to provide excellent care for your family!
